

X-OFFSHORE

5.30M SOLID GRP HULL

A truly dedicated offshore vessel has got to be one of the toughest challenges any boat designer can ever undertake.

When Tim Stessl began the hunt to find an offshore vessel for the X series, he already knew what he wanted, "I love the ride handling of the classic time proven designs". The X Series team will just improve upon them using modern day building techniques and materials that simply weren't available to the original designers.

By completely doing away with wood and using various different composites we are able to significantly lighten the weight of the vessel above the water line and increase the glass and resin weights below the waterline. What you end up with is the same exceptional proven ride, a stronger hull and most importantly a lower centre of gravity. The benefits of a lower centre of gravity on the modern boat with all its electronic wizardry should not be underestimated.

The X Serries internal designs are flexible, They come standard with a full flat floor and sealed deck and enclosed battery compartment. However, should you wish to customise the vessel to suit your fishing style we can accommodate you.

Casting platform modules with water proof hatches, live bait tanks, rear steps electric motor mount brackets can all be added.

SPECS

- Beam** - 2.35m O/A
- Length** - 5.30m
- Internal Freeboard** - 700mm
- Weight** - 700kg approx
- People** - 5
- Max HP** - 115
- Shaft** - X Long 25"

X OFFSHORE

STANDARD FEATURES

- Anchor well (flow coated inside)
- Front storage/cast deck and flow coated inside and Foam Flotation under deck
- S/S anchor well drain
